## DESIGNER FAUCETS

### CARE & MAINTENANCE INFORMATION

Clean filters and aerators periodically to ensure proper operation.

Wipe fixture with a clean, soft, damp cloth and blot dry as often as possible.

Recommended cleaning materials are water and mild detergent solutions.

**DO NOT** without exception, and under any circumstances, use cleaners containing harsh chemicals or abrasive content on our products (i.e. Comet, Ajax, Simple Green, window cleaner, vinegar). This will cause harm to the finished surface of our products.

To protect and extend the life of our finishes, we recommend the periodic application of 100% carnauba wax, typically found in a hard shell car wax (such as Turtle wax, to name one common and readily available brand).

This is especially important where hard water, well water and any water source containing high mineral content is used. If left unprotected, this water may etch the metal, leaving a whitish effect, which cannot be removed or undone.
